Abhishek Khatri

+91-7983142392 | abhikhatri67@gmail.com | Portfolio | GitHub | Medium | LinkedIn
Lead Software Engineer, GoGroup (Noida – India)

SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), Redux, Angular, HTML5, CSS3
Architecture: Design Systems, Reusable Components, State Management, Frontend Performance, Component-Driven Development
Backend/Cloud: Node.js, REST APIs, GraphQL, Ruby on Rails, Redis, AWS (EC2, S3, CloudFront, Serverless)
Testing & Tooling: Vitest, Playwright, Git, Vite, Webpack, npm, Babel
Data & Visualisation: Highcharts, Recharts, Real-Time Data, Data-Dense Dashboards, IoT
AI/LLM: LLM APIs, Structured Outputs, AI-assisted development, Cursor, Claude

EXPERIENCE (9.5 Years +)

Lead Software Engineer, Principal Software Engineer, Senior Software Engineer (Jul 2021 – Present)

GoGroup | ReactJS, TypeScript, Ruby on Rails, Vitest, React Testing Library, Playwright, GraphQL, Recharts, AWS

- **Architected and led development of heyport**, a customer-facing React platform from inception to production, supporting **10,000+ port calls**, reducing manual communication by **90%** and associated CO_2 emissions by **14%**.
- **Designed and established** reusable frontend patterns and component-driven architectures, partnering with product, design, and backend teams to translate complex requirements into scalable user experiences.
- **Architected and developed an AI-powered email ingestion workflow** that extracts structured data from unstructured emails using LLMs, validates extracted fields, and persists normalised records into the application database.
- **Initiated and championed the adoption of AI-assisted development**, evaluating tools including Claude Code and Cursor, demonstrating their value to stakeholders, and driving adoption across the engineering team.
- Integrated React applications with backend APIs and data services, handling complex state, asynchronous workflows, data visualisation, and operational dashboards.
- Architected and optimised AWS infrastructure across **EC2, S3, CloudFront, and serverless services** for scalability, reliability, and performance.
- **Established unit and integration testing practices** for reusable React components using Vitest and React Testing Library, improving regression coverage and maintainability.
- Mentored engineers through architecture discussions, code reviews, and hands-on collaboration, establishing stronger engineering practices across the team.
- Led development of a green-energy customer portal from inception to production in **one month**, reducing delivery timelines by **20%**.

Front-End Team Lead, Software Development Engineer (Mar 2017 – Jul 2021)

Smart Joules Private Limited | Angular, NodeJS, Redis, GraphQL, Serverless, AWS, Highcharts

- Led and scaled the **Frontend & UI/UX team from 1 → 6 engineers**, establishing reusable patterns, code-review practices, and engineering standards that increased delivery capacity **5×**.
- Built **JouleTrack**, a Progressive Web App for energy management, from the ground up with Angular and **real-time IoT connectivity**.
- Designed data-intensive monitoring dashboards using **Highcharts**, enabling visualisation and analysis of real-time energy telemetry.
- Engineered real-time communication between IoT controllers, backend services, and frontend applications for reliable data synchronisation.
- Collaborated on **Node.js, GraphQL, Redis, and serverless AWS** services, improving reliability, scalability, and API efficiency.
- Reduced infrastructure costs by **25%** through serverless architecture and accelerated product iteration by **40%** through early frontend prototyping.

AWARDS & RECOGNITION

The Founder Award (2023) – Honoured by GoGroup for outstanding contributions to company success and innovation.
Most Inspirational Award (2022) – Recognised by GoGroup for exceptional leadership and motivating team members toward achieving organisational goals.

EDUCATION

Bachelor's in Technology (Computer Science) - 7.5/10
DIT University (Dehradun, India) 2013-2017
